

communication with said first frame assembly such that said second frame assembly and said first frame assembly are simultaneously rotatable about said axis; and  
a locking assembly for selectively locking said first set or said second set of folding boards into said web-receiving position.

27. A system as defined in claim 26, wherein said first frame assembly and said second frame assembly are connected to at least one mounting arm.

28. A system as defined in claim 26, wherein said locking assembly comprises a locking pin.

29. A system as defined in claim 28, wherein said pin is provided with an air channel for removing dust from a set of folding boards located at said web-receiving position.

30. A system as defined in claim 26, wherein said first frame assembly, said second frame assembly, or combinations thereof, comprise a continuous frame.

31. A system as defined in claim 26, wherein said first frame assembly, said second frame assembly, or combinations thereof, comprise a discontinuous frame.

32. A system for selectively replacing a first bar and a first set of folding boards with a second bar and a second set of folding boards, said system comprising:

a first frame assembly secured to a first bar and a first set of folding boards, said first frame assembly being rotatable about an axis for placing said first bar and said first set of folding boards into a web-receiving position;

a second frame assembly secured to a second bar and a second set of folding boards, said second frame assembly being rotatable about said axis such that said second bar and said second set of folding boards are also capable of being placed into
